Harshita Shyale

Design Engineer, AI and agentic products

Seattle, WA · moving to San Francisco, open to NYC and remote · hello@harshitashyale.com · harshitashyale.com · linkedin.com/in/harshita-shyale

SUMMARY

I design AI products and write the code that ships them. At Salesloft, now merged with Clari and used by 5,000+ companies, I lead design for agentic revenue forecasting and build front end for what I design. I started as a software engineer at HPE, so React and TypeScript are where I sketch.

EXPERIENCE

Salesloft (merged with Clari, Dec 2025), Product Designer — Mar 2025 – Present

Revenue AI platform: 5,000+ customers, about $10T in revenue under management.

- Lead design for agentic revenue forecasting, my largest scope: bringing Clari Forecast, a Leader in Gartner's 2025 Magic Quadrant for Revenue Action Orchestration, together with Salesloft's AI agents after the merger.
- Took Influence Graph from first sketch to early access. AI maps who holds power in a deal from calls and emails, quotes the transcript behind each call, and learns from every rep correction. Customers in demos: “you read my mind.”
- AI email steps were skipped 2.6× more than manual ones because drafts felt generic. Designed a preview that shows what the agent is reading as it writes; it became the loading and preview pattern for AI agent features across Salesloft.
- Designed custom object support, the missing piece blocking a $14.2M migration path for 155 enterprise accounts, and turned a support-ticket process into a two-minute admin setup.
- Rebuilt cadence creation to start from proven strategies, and designed Collections for teams running thousands of cadences; both cut setup time by an estimated 70%.
- Co-led 12 interviews (4 with enterprise customers) on the Drift integration. The synthesis set the Signals team’s roadmap, and product leadership adopted the research docs as the team standard.
- Ship production front-end code for my own designs, working in the codebase with engineers rather than handing off specs.

Hewlett Packard Enterprise, Software Designer, then UX Designer — Sep 2021 – Aug 2023

- Built RPA bots that took over manual order processing and handed every hard call to a person. Task accuracy improved 90% and it saved $3.08M. Won HPE’s President’s Quality Award.
- Designed, then built in React, an ML observability tool that shows data scientists when a model is quietly getting worse.

Nutanix, UX Developer Intern — Jan 2021 – Jun 2021

- Redesigned and rebuilt the customer success team’s dashboard with its daily users. Missed requests fell 40%.

CLIENT WORK

- **GitHub**, research partner, 2024. The redesigned pull requests tested worse than the old ones; we found out why, and our recommendations shipped: 60% less mouse movement, 40% faster file navigation.
- **Sony**, design partner, 2025. Designed Sonia, an AI assistant that asks before it uses your data.

EDUCATION

University of Washington, M.S. Human Centered Design & Engineering — 2023 – 2025

Co-directed the Office of Inclusive Design in student government; led the Office of International Student Advocacy.

RV College of Engineering, B.E. Computer Science & Engineering — 2017 – 2021

Ran the college theatre company and directed a play that won at the national level.

SKILLS

Engineering: JavaScript, TypeScript, React, Next.js, HTML, CSS, Python, Git, prototyping in code

Design: product design, interaction design, AI and agent UX, human-in-the-loop design, design systems, user research, Figma

Built: harshitashyale.com, designed and coded by hand in plain JavaScript
